

# CARBON FOOTPRINT REPORT 2023

→ <https://www.katalistaventures.it/>

## Emission factors

---

Greenhouse gas (GHG) emissions were calculated following the methodology outlined in the GHG Standard for Scopes 1, 2 and 3, and emission factors were primarily derived from the DEFRA database.

## Methodology

---

<b>Commuting</b>	Commuting emissions were estimated by collecting data on employees' work-from-office days, average commute distances, and primary modes of transportation through a questionnaire.
<b>Digital</b>	Emissions associated with digital services were estimated using data on online meeting frequency, newsletters sent, website visitors, and cloud server storage space.
<b>Flights</b>	Flight emissions were estimated based on the distance between departure and arrival airports, incorporating data for any interim transfer airports.
<b>Hotel stay</b>	Hotel stay emissions were estimated using the total number of rooms booked, number of participants per room and nights spent at the hotel.
<b>Transport</b>	Transportation emissions were estimated based on total distance traveled and vehicle mode, utilizing a distance-based method due to data limitations to kilometers traveled.
<b>Events</b>	Emissions associated with events were estimated using data on the number of events, total participants (distinguishing local and international), event duration, participant accommodation needs, number of coffee breaks, meals provided, and meal types.

## Excluded data

---

<b>Commuting</b>	Commuting data for two employees was excluded from the final calculations due to incomplete data collection, as they departed the company in early 2023.
<b>Digital</b>	Emissions associated with sent emails were not factored into the final calculations due to a lack of data.

# Greenhouse gas emissions overview (2023)

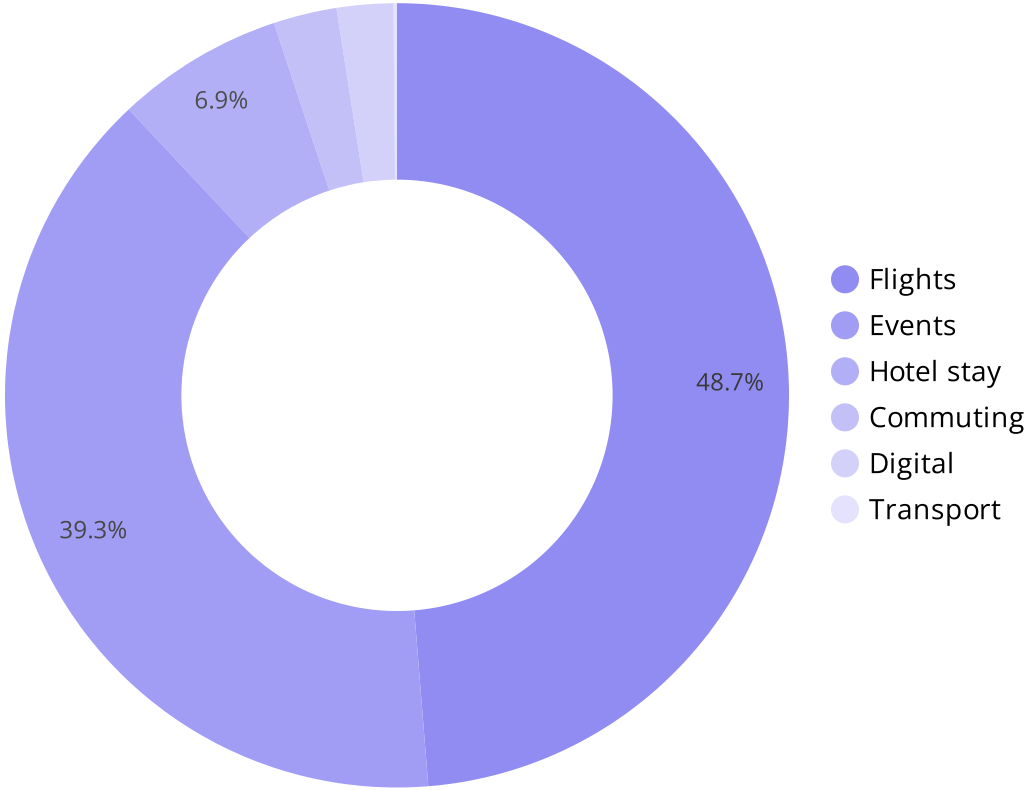

Total t CO2e  
**61.74**

Footprint per employee  
**7.717**

Category	Estimate t CO2e ▾
Flights	30.08
Events	24.25
Hotel stay	4.27
Commuting	1.61
Digital	1.44
Transport	0.09

**Grand total** **61.74**

▪ Commuting data for two employees was excluded from the final calculations due to incomplete data collection, as they departed the company in early 2023.

\*Note: All figures are presented in metric tonnes of greenhouse gases.

**Planet  
Positive**
